

## *Training and Exercise Support Services*

RRT has a thorough working knowledge of the operation and employment of numerous tactical Commercial or Government Off The Shelf (COTS/GOTS), IO/IW EW collection and exploitation systems in field use today. RRT has fully developed courseware and can readily author new materials that will fully cover all topic areas in support of the IO/IW EW training goals of our customers. The standard design approach for all curriculum development performed by RRT is the Systems Approach to Training (SAT) methodology. Instruction is performed onsite at our Fredericksburg facility or at your desired location to include overseas and semi-permissible, tactical areas.

RRT is well versed in Exercise Support and has demonstrated experience in selecting and establishing target ranges. RRT will establish multi-signal live RF target environments to emulate as closely as possible operational field conditions. RRT excels in providing single channel push to talk (PTT) environments but can easily extend the communications network to include: Cordless Phones, Repeater Networks, Cellular Handsets, wireless access points and other radios including HF radio sets. RRT exercise scenarios also provide pre-mission, mission and post-mission applications to grade effective analyst participation through metrics tied to successful exploitation and analysis of traffic as presented by collectors to fill Commanders' CCIRs, PIRs, EEIs and identify Intel Gaps for follow on prosecution.
