

## **RRT Mobile Antenna Brackets & Risers**

### **OVERVIEW**

RRT Inc. has designed and developed a series of extremely heavy duty vehicle antenna mounting options suitable for both mobile and marine applications. We initially designed and supplied these mounts to meet the specific needs of a select few commercial and U.S. Government customers, but we were so pleased with their performance that we've been including a number of these same mounts as kit components in our own electronic or communication system kit packages. All of these brackets have either a very low gloss powder-coat, passivated aluminum or a matte-black polycarbonate, low-corrosion finish. They are capable of mounting and supporting a variety of HF/VHF/UHF/GSM/Cellular antenna designs and all come with corrosion resistant Grade 8/Yellow Zinc mounting hardware. These brackets have been pre-drilled with either commercial industry or NATO Standard antenna hole patterns. We would like to offer you the opportunity to try these antenna mounting options as potential solutions that may fill your organizational requirements. Please give us a call and inquire for more specifics on these standard products. If you need a custom solution, we'll be more than glad to work with you on that as well.
